Investment Universe and Objective

A global equity fund that invests in companies considered to be of high quality by the Fund Managers. The Fund is benchmark agnostic and has no restrictions in terms of geography, sector type or market capitalisation, though it is mainly tilted towards larger companies in developed markets. Companies are selected upon a rigorous investment process which combines quantitative screening with fundamental analysis, and embeds a socially responsible approach. The Fund seeks to achieve long-term capital growth.

Fund Management analysis can be found on P.5

Equity Investment Rate: **93.12%**

Equity Exposure: **95.31%**

PROFILE

- **Fund Inception Date:** 31/05/2019
- **Fund Manager:** Mark Denham since 31/05/2019, Obe Ejikeme since 31/05/2019
- **Fund AUM:** 109M€ / 126M\$⁽¹⁾
- **Domicile:** Luxembourg
- **Reference Indicator:** MSCI WORLD (USD) (Reinvested Net Dividends)
- **Base Currency:** EUR
- **NAV:** 173.90€
- **Dividend Policy:** Accumulation
- **Fund Type:** UCITS

Fund Performance vs. Comparator Benchmark Since Launch

KEY POINTS

An intergenerational and responsible fund geared to the long-term, seeking to help investors build a legacy for their children and grandchildren.

A selective investment process based on rigorous fundamental analysis, quantitative screening and socially responsible investment filters and analysis.

A focus on quality companies, with sustainable profitability and reinvestment of profits for future growth to seek a high compounding effect.

A concentrated portfolio of high conviction names seeking to provide steady growth of investors' capital over the long term.

'Quality' is the name of the game

► **Quality companies offer a high compounding effect and tend to be more robust during economic downturns.** They are typically less leveraged and have stable margins, making them more cash generative and in turn, allowing them to reinvest for the future. By reinjecting capital into their business rather than paying out dividends, they can remain profitable over time.

► **For us, the concept of quality is also intrinsically linked to the environmental, social and governance trail these companies leave behind.** Thus, we use socially responsible investment filters to refine our selection, such as excluding companies operating in harmful sectors and emphasizing those which have a positive contribution to society or the environment.

MSCI ESG Score Portfolio vs Reference Indicator

Source: MSCI ESG Score. ESG Leaders represent companies rated AAA and AA by MSCI. ESG Average represent companies rated A, BBB, and BB by MSCI. ESG Laggards represent companies rated B and CCC by MSCI.

Carbon Emission Intensity (T CO2E/USD mn Revenues) converted to Euro

Source: S&P Trucost, 29/10/21. The reference indicator of each Fund is hypothetically invested with identical assets under management as the respective Carmignac equity funds and calculated for total carbon emissions and per million Euro of revenues.

Carbon emission figures are based on S&P Trucost data. The analysis is conducted using estimated or declared data measuring Scope 1 and Scope 2 carbon emissions, excluding cash and holdings for which carbon emissions are not available. To determine carbon intensity, the amount of carbon emissions in tonnes of CO2 is calculated and expressed per million dollar of revenues (converted to Euro). This is a normalized measure of a portfolio's contribution to climate change that enables comparisons with a reference indicator, between multiple portfolios and over time, regardless of portfolio size.

Please refer to the glossary for more information on the calculation methodology

PROMOTIONAL MATERIAL

FUND MANAGEMENT ANALYSIS

Market environment

Equity markets are gradually integrating the prospect of higher, longer-lasting inflation as supply bottlenecks persist. While the sharp rise in interest rates worked against them in September, they bounced back strongly in October. However, it is interesting to note that, commodities aside, the sectors that generally benefit from inflationary conditions did not shine. Quite the opposite: technology stocks outperformed, helped by the fact that this inflation spike has coincided with slower GDP growth, encouraging investors to seek out companies that can offer good visibility over future earnings growth while keeping margins high.

Performance commentary

In recent months we have stressed the importance of focusing on quality when selecting stocks, given the risk of weaker growth and higher inflation. Our strategy continues to pay off. Absolute performance was good, and better than our reference indicator's. We generated significant alpha in the technology sector, especially through our investments in software companies Intuit, Microsoft, Adobe and SAP. Among our healthcare stocks, Danish pharmaceutical giant Novo Nordisk raised performance considerably, as did Thermo Fisher Scientific and Zoetis. There was also a decent contribution from our industrial (Kingspan Group) and communication services (Alphabet) names.

Outlook and Investment strategy

Our strategy prioritises investments in high-quality companies that we think offer the best long-term prospects. Most of these are now found in the technology, healthcare and communication services sectors. We recently added US cybersecurity company Palo Alto Networks to the portfolio. Homeworking and the constant migration over to the Cloud have increased companies' IT footprint, making them vulnerable and requiring more and more cutting-edge protection. We also took advantage of weakness in some of our renewable energy stocks, such as Danish wind turbine leader Orsted, to strengthen our positions. However, we reduced some of our most cyclical positions, including travel company Booking.com.

GLOSSARY

Active Weight: Represents the absolute value of the difference between the weight of a holding in the manager's portfolio and the same holding in the benchmark index.

Alpha: Alpha measures the performance of a portfolio compared to its reference indicator. Negative alpha means the fund performed less well than its reference indicator (e.g. if the indicator increased by 10% in one year and the fund increased by only 6%, its alpha is -4). Positive alpha means the fund performed better than its reference indicator (e.g. if the indicator increased by 6% in one year and the fund increased by 10%, its alpha is 4).

Beta: Beta measures the relationship between the fluctuations of the net asset values of the fund and the fluctuations of the levels of its reference indicator. Beta of less than 1 indicates that the fund "cushions" the fluctuations of its index (beta = 0.6 means that the fund increases by 6% if the index increases by 10% and decreases by 6% if the index falls by 10%). Beta higher than 1 indicates that the fund "magnifies" the fluctuations of its reference indicator (beta = 1.4 means that the fund increases by 14% when the index increases by 10% but also decreases by 14% when the index decreases by 10%). Beta of less than 0 indicates that the fund reacts inversely to the fluctuations of its reference indicator (beta = -0.6 means that the fund falls by 6% when the index increases by 10% and vice versa).

Capitalisation: A company's stock market value at any given moment. It is obtained by multiplying the number of shares of a company by its stock exchange price.

ESG: E for Environment, S for Social, G for Governance

ESG score Calculation: Only the Equity portion of the fund considered. Overall Fund Rating calculated using MSCI Fund ESG Quality Score methodology: excluding cash and non ESG-rated holdings, performing a weighted average of the normalized weights of the holdings and the Industry-Adjusted Score of the holdings, multiplied by (1+Adjustment%) which consists of the weight of positively trending ESG ratings minus the weight of ESG Laggards minus the weight of negatively trending ESG ratings. For a detailed explanation see "MSCI ESG Fund Ratings Methodology", Section 2.3. Updated April 2020.

<https://www.msci.com/documents/1296102/15388113/MSCI+ESG+Fund+Ratings+Exec+Summary+Methodology.pdf/ec622acc-42a7-158f-6a47-ed7aa4503d4f?t=1562690846881>.

Investment grade: A loan or bond that rating agencies have rated AAA to BBB-, generally indicating relatively low default risk.

Investment/exposure rate: The investment rate constitutes the volume of assets invested expressed as a percentage of the portfolio. Adding the impact of the derivatives to this investment rate results in the exposure rate, which corresponds to the real percentage of asset exposure to a certain risk. Derivatives can be used to increase the underlying asset's exposure (stimulation) or reduce it (hedging).

Net asset value: Price of all units (in an FCP) or shares (in a SICAV).

Rating: The rating measures the creditworthiness of a borrower (bond issuer). Ratings are published by rating agencies and offer the investor reliable information on the risk profile associated with a debt security.

S&P Trucost methodology: Trucost uses company disclosed emissions where available. In the instance it is not available, they use their proprietary EEIO model. The model uses the revenue breakdown of the company by industry sector to estimate the carbon emissions. For further information, please visit: www.spglobal.com/spdji/en/documents/additional-material/faq-trucost.pdf. Although S&P Trucost does report Scope 3 emissions where available, such emissions are commonly considered to be poorly defined and inconsistently calculated by companies. As a result, we have chosen not to include them in our portfolio emission calculations. To calculate the portfolio carbon emissions, the companies' carbon intensities (tonnes of CO₂e /USD mn revenues) are weighted according to their portfolio weightings (adjusted for holdings for which carbon emissions are not available), and then summed.

Scope 1: Greenhouse gas emissions generated from burning fossil fuels and production processes which are owned or controlled by the company.

Scope 2: Greenhouse gas emissions from consumption of purchased electricity, heat or steam by the company.

Scope 3: Other indirect Greenhouse gas emissions, such as from the extraction and production of purchased materials and fuels, transport-related activities in vehicles not owned or controlled by the reporting entity, electricity-related activities (e.g. T&D losses) not covered in Scope 2, outsourced activities, waste disposal, etc.

VaR: Value at Risk (VaR) represents an investor's maximum potential loss on the value of a financial asset portfolio, based on a holding period (20 days) and confidence interval (99%). This potential loss is expressed as a percentage of the portfolio's total assets. It is calculated on the basis of a sample of historical data (over a two-year period).

Main risks of the fund

Equity: The Fund may be affected by stock price variations, the scale of which is dependent on external factors, stock trading volumes or market capitalization. **Currency:** Currency risk is linked to exposure to a currency other than the Fund's valuation currency, either through direct investment or the use of forward financial instruments. **Discretionary management:** Anticipations of financial market changes made by the Management Company have a direct effect on the Fund's performance, which depends on the stocks selected. The Fund presents a risk of loss of capital.
