

GB00BJHPHZ49

Monthly Factsheet - 28/03/2024

INVESTMENT OBJECTIVE

A Europe ex-UK equity strategy seeking to achieve capital growth over a minimum of five years. The Fund follows a selective bottom-up investment process to find quality companies, businesses with attractive long-term prospects that can grow under their own steam, irrespective of the macroeconomic environment.

Fund Management analysis can be found on P.4

CARBON EMISSION INTENSITY (T CO2E/USD MN REVENUES) converted to Euro

Source: S&P Trucost, 28/03/2024. The reference indicator of each Fund is hypothetically invested with identical assets under management as the respective Carmignac equity funds and calculated for total carbon emissions and per million Euro of revenues.

Carbon emissions figures are based on S&P Trucost data. The analysis is conducted using estimated or declared data measuring Scope 1 and Scope 2 carbon emissions, excluding cash and holdings for which carbon emissions are not available. To determine carbon intensity, the amount of carbon emissions in tonnes of CO₂ is calculated and expressed per million dollar of revenues (converted to Euro). This is a normalized measure of a portfolio's contribution to climate change that enables comparisons with a reference indicator, between multiple portfolios and over time, regardless of portfolio size.

FUND MANAGEMENT ANALYSIS

MARKET ENVIRONMENT

March proved to be another good month for several asset classes with equities up, bonds up, commodities up, iron ore and a stronger dollar. Within equity markets, developed markets outperformed emerging markets, Europe outperformed the US, with large cap and small/mid cap returns being broadly equal reflecting a broadening out of the overall market from the narrow leadership earlier in the year. In Europe, there was certainly evidence of rotational forces at work with the best performing sectors being Retail, Banks, Real Estate, Chemicals and Energy, all of which except for banks were firmly in the bottom half of the performance table in the previous month. The laggards were, Travel and Leisure, Consumer products & services and Technology all of which were among last month's winners. The key macro debate remains focused on the timing and scale of interest rate cuts in US and Europe. The European market received a boost from positive economic news this week, as various indicators of economic sentiment showed improvement. Both the ZEW survey and PMIs indicated a rise in economic sentiment, signaling a positive outlook for the European market. This news comes as a welcome relief, as these indicators had previously been at depressed levels.

PERFORMANCE COMMENTARY

During the month of March, the Fund recorded a positive absolute performance, though below its reference indicator. Our overweight positions in Information Technology and Healthcare were the biggest drivers of performance over the month. Notably, SAP was among the best three performers after announcing new commerce cloud payment solution to help retailers stay ahead of changing customer expectations. In the Healthcare sector, Novo Nordisk, specializing in obesity drugs, demonstrated remarkable resilience with strong prescription numbers throughout the month. Additionally, Lonza made a strategic move by acquiring a manufacturing facility in the US, thereby expanding its production capacity in the rapidly expanding field of biologic medicines. As a result of this acquisition, Lonza has raised its medium-term sales guidance, reflecting the positive impact of the deal on its future growth prospects. During the period, the Financials sector was the biggest detractor, and Deutsche Borse had the weakest performance among all the names in the Fund. Our relative performance was most impacted by not having any exposure to Banks, as European bank shares reached their highest level in six years after announcing record shareholder returns and profits surged thanks to rising interest rates. Having under exposure to Industrials and Consumer Discretionary penalised the Fund this month, while the lack of investments in the Energy and Communication Services sectors also had a negative effect on our performance.

OUTLOOK AND INVESTMENT STRATEGY

During the month of March, we capitalized on the market's positive momentum to secure profits and adjust our portfolio. We increased our exposure to Information Technology and Industrials by making modest additions to our holdings in Capgemini and Experian. Additionally, we introduced a new company to our portfolio, Elis, which is a French corporation operating in the Industrials sector, specifically in the corporate cleaning services space. We also continued to increase our position in Adyen and Hermes, position that we initiated at the end of January. The Fund continues to rely on bottom-up fundamental analysis with a medium term horizon. Our perspective remains cautious of the potential impact of weaker corporate and economic data. We remain open to the possibility of a cyclical recovery and are actively exploring opportunities to incorporate cyclical recovery into our investment strategy. However, we have not made any significant changes in this regard at this time. The potential for greater visibility in the market is expected to yield favourable outcomes. We anticipate that as economic growth slows down, inflation will also decrease, leading to a gradual decline in interest rates this. Consequently, we aim to mitigate any potential risks associated with net cyclical, beta, momentum, and illiquidity.

GLOSSARY

Active Management: An investment management approach where a manager aims to beat the market through research, analysis and their own judgement. See also Passive management.

Active share: Portfolio active share measures how different from the reference indicator the portfolio is. The closer the active share is to 100%, the less identical stocks a portfolio has compared to its reference indicator, thus the more active the portfolio manager is compared to the market.

Active Weight: Represents the absolute value of the difference between the weight of a holding in the manager's portfolio and the same holding in the benchmark index.

Alpha: Alpha measures the performance of a portfolio compared to its reference indicator. Negative alpha means the fund performed less well than its reference indicator (e.g. if the indicator increased by 10% in one year and the fund increased by only 6%, its alpha is -4). Positive alpha means the fund performed better than its reference indicator (e.g. if the indicator increased by 6% in one year and the fund increased by 10%, its alpha is 4).

Beta: Beta measures the relationship between the fluctuations of the net asset values of the fund and the fluctuations of the levels of its reference indicator. Beta of less than 1 indicates that the fund "cushions" the fluctuations of its index (beta = 0.6 means that the fund increases by 6% if the index increases by 10% and decreases by 6% if the index falls by 10%). Beta higher than 1 indicates that the fund "magnifies" the fluctuations of its reference indicator (beta = 1.4 means that the fund increases by 14% when the index increases by 10% but also decreases by 14% when the index decreases by 10%). Beta of less than 0 indicates that the fund reacts inversely to the fluctuations of its reference indicator (beta = -0.6 means that the fund falls by 6% when the index increases by 10% and vice versa).

Bottom up investing: Investment based on analysis of individual companies, whereby that company's history, management, and potential are considered more important than general market or sector trends (as opposed to top down investing).

Capitalisation: A company's stock market value at any given moment. It is obtained by multiplying the number of shares of a company by its stock exchange price.

Duration: A bond's duration is the period beyond which interest rate variations will no longer affect its return. The duration is like a discounted average lifetime of all flows (interest and capital).

FCP: Fonds commun de placement (French common fund).

Investment grade: A loan or bond that rating agencies have rated AAA to BBB-, generally indicating relatively low default risk.

Investment/net exposure rate: The investment rate constitutes the volume of assets invested expressed as a percentage of the portfolio. Adding the impact of the derivatives to this investment rate results in the net exposure rate, which corresponds to the real percentage of asset exposure to a certain risk. Derivatives can be used to increase the underlying asset's exposure (stimulation) or reduce it (hedging).

Modified duration: A bond's modified duration measures the risk attached to a given change in the interest rate. Modified duration of +2 means that for an instantaneous 1% rate increase, the portfolio's value would drop by 2%.

Net asset value: Price of all units (in an FCP) or shares (in a SICAV).

Rating: The rating measures the creditworthiness of a borrower (bond issuer).

Sharpe ratio: The Sharpe ratio measures the excess return over the risk-free rate divided by the standard deviation of this return. It thus shows the marginal return per unit of risk. When it is positive, the higher the Sharpe ratio, the more risk-taking is rewarded. A negative Sharpe ratio does not necessarily mean that the portfolio posted a negative performance, but rather that it performed worse than a risk-free investment.

VaR: Value at Risk (VaR) represents an investor's maximum potential loss on the value of a financial asset portfolio, based on a holding period (20 days) and confidence interval (99%). This potential loss is expressed as a percentage of the portfolio's total assets. It is calculated on the basis of a sample of historical data (over a two-year period).

Volatility: Range of price variation of a security, fund, market or index, which enables the measurement of risk over a given period. It is determined using the standard deviation obtained by calculating the square root of the variance. The variance is obtained by calculating the average deviation from the mean, which is then squared. The greater the volatility, the greater the risk.

ESG DEFINITIONS & METHODOLOGY

ESG: E for Environment, S for Social, G for Governance

ESG score Calculation: Only the Equity and Corporate Bond holdings of the fund considered. Overall Fund Rating calculated using MSCI Fund ESG Quality Score methodology: excluding cash and non ESG-rated holdings, performing a weighted average of the normalized weights of the holdings and the Industry-Adjusted Score of the holdings, multiplied by (1+Adjustment%) which consists of the weight of positively trending ESG ratings minus the weight of ESG Laggards minus the weight of negatively trending ESG ratings. For a detailed explanation see "MSCI ESG Fund Ratings Methodology", Section 2.3. Updated June 2021. <https://www.msci.com/documents/1296102/15388113/MSCI+ESG+Fund+Ratings+Exec+Summary+Methodology.pdf/ec622acc-42a7-158f-6a47-ed7aa4503d4f?t=1562690846881>.

S&P Trucost methodology: Trucost uses company disclosed emissions where available. In the instance it is not available, they use their proprietary EEIO model. The model uses the revenue breakdown of the company by industry sector to estimate the carbon emissions. For further information, please visit: www.spglobal.com/spdji/en/documents/additional-material/faq-trucost.pdf. Although S&P Trucost does report Scope 3 emissions where available, such emissions are commonly considered to be poorly defined and inconsistently calculated by companies. As a result, we have chosen not to include them in our portfolio emission calculations.

To calculate the portfolio carbon emissions, the companies' carbon intensities (tonnes of CO₂e /USD mn revenues) are weighted according to their portfolio weightings (normalized for holdings for which carbon emissions are not available), and then summed.

Scope 1: Greenhouse gas emissions generated from burning fossil fuels and production processes which are owned or controlled by the company.

Scope 2: Greenhouse gas emissions from consumption of purchased electricity, heat or steam by the company.

Scope 3: Other indirect Greenhouse gas emissions, such as from the extraction and production of purchased materials and fuels, transport-related activities in vehicles not owned or controlled by the reporting entity, electricity-related activities (e.g. T&D losses) not covered in Scope 2, outsourced activities, waste disposal, etc.
