

GB00BK1W2P36

Monthly Factsheet - 31/03/2025

INVESTMENT OBJECTIVE

The strategy seeks to achieve capital growth over a period of at least five years, benefiting from the dynamism and growth potential of emerging markets. The Fund Manager uses an active asset allocation to identify companies offering long-term growth potential and attractive cash generation, in underpenetrated sectors and in countries with healthy fundamentals, within a socially responsible framework. The Fund has no sectoral or market cap constraints although it typically invests in large and mid-cap companies.

Fund management analysis can be found on P.3

PERFORMANCE

FUND MANAGEMENT ANALYSIS

MARKET ENVIRONMENT

- The emerging equities markets fell back in March, but nevertheless outperformed the developed market indices. (Hang Seng -3.0%, KOSPI -6.3%, BSE SENSEX +4.2%, BOVESPA +4.6%).
- On the geopolitical front, Donald Trump's administration continues to threaten its main trading partners by increasing tariffs in many sectors, including the automotive industry.
- The National People's Congress met for the annual 'Two Sessions' to decide the country's policy direction and announce its growth target of +5% for the year 2025.
- The government has stated its intention to support the consumer, marking a major shift in the country's growth model, which is now centred on domestic consumption.
- In South Korea, the financial regulator has reinstated short selling. Measures had been put in place in November 2023 following illegal short selling offences. The lifting of restrictions is intended to encourage the comeback of institutional investors.
- Finally, in India, after several months of underperformance, the markets have experienced a technical rebound.

PERFORMANCE COMMENTARY

- In this context, the fund posted a negative performance, as did its reference indicator.
- Our main detractor was Taiwan's TSMC, following the downward trend of the American tech giants, penalised by global economic uncertainties. As a result, our positions in Elite Material and Lite-On also had a negative impact on our portfolio.
- Our portfolio of Chinese stocks weighed on the fund's good performance. We can mention the decline in the stock of Beike, a provider of transactional services in the real estate sector, which saw its stock fall following the publication of its quarterly results, which were disappointing, particularly in terms of profitability.
- In India, the price of Kotak Mahindra stock continued to rise in 2025, benefiting from the appointment of a new chief technology officer, a major turning point in the bank's technological leadership.
- Finally, our Latin American portfolio was unable to support the portfolio over the period, as was the case with the MercadoLibre stock, which fell back in March after a strong start to the year.

OUTLOOK AND INVESTMENT STRATEGY

- Despite the uncertainties related to D. Trump's policies, we remain constructive on emerging equities, believing that current valuations reflect a pessimistic scenario. Moreover, emerging markets are benefiting from the uncertainty in the United States: Trump's policies seem to have the opposite effect, benefiting emerging markets.
- We remain constructive on China, given the change in perception. The markets realise that geopolitical tensions are hurting China but are not destroying it. Moreover, technological progress, particularly in AI and productivity, should provide further stimulus to the economy. This is why we want to maintain a decent exposure to China, with a slight underweight. Our Chinese portfolio is mainly composed of technology/innovative companies. Conversely, we avoid the old economy and cyclical sectors.
- We are maintaining a significant allocation to India, where the long-term outlook remains promising (strong growth, political stability, healthy current account) despite the recent weakness. Our trip to India confirmed the country's promising outlook and the recent correction offers us interesting entry points on stocks that we are following.
- We took advantage of this correction to increase our exposure to India by strengthening our positions in the e-commerce, tech and insurance sectors, which have fallen sharply. We are increasing our stake in PB Fintech (Policybazaar), the leader in online insurance services, capturing 21% of all new insurance products sold in India thanks to its unique platform.
- Finally, we remain constructive on our Latin American portfolio, where valuations remain attractive. Despite the tariff risks, we remain constructive on Mexico. President Sheinbaum has managed to maintain good relations with D. Trump. Meanwhile, in Brazil, despite the significant rebound since the beginning of the year, we are maintaining our Brazilian stocks (particularly in energy infrastructure companies) due to their attractive risk/return profile.

CARBON EMISSION INTENSITY (T CO2E/USD MN REVENUES)
converted to Euro

Source: MSCI, 31/03/2025. The reference indicator of each Fund is hypothetically invested with identical assets under management as the respective Carmignac equity funds and calculated for total carbon emissions and per million Euro of revenues.

Carbon emissions figures are based on MSCI data. The analysis is conducted using estimated or declared data measuring Scope 1 and Scope 2 carbon emissions, excluding cash and holdings for which carbon emissions are not available. To determine carbon intensity, the amount of carbon emissions in tonnes of CO2 is calculated and expressed per million dollar of revenues (converted to Euro). This is a normalized measure of a portfolio's contribution to climate change that enables comparisons with a reference indicator, between multiple portfolios and over time, regardless of portfolio size.

GLOSSARY

Active Management: An investment management approach where a manager aims to beat the market through research, analysis and their own judgement.

Active share: Portfolio active share measures how different from the reference indicator the portfolio is. The closer the active share is to 100%, the less identical stocks a portfolio has compared to its reference indicator, thus the more active the portfolio manager is compared to the market.

Active Weight: Represents the absolute value of the difference between the weight of a holding in the manager's portfolio and the same holding in the benchmark index.

Alpha: Alpha measures the performance of a portfolio compared to its reference indicator. Negative alpha means the fund performed less well than its reference indicator (e.g. if the indicator increased by 10% in one year and the fund increased by only 6%, its alpha is -4). Positive alpha means the fund performed better than its reference indicator (e.g. if the indicator increased by 6% in one year and the fund increased by 10%, its alpha is 4).

Beta: Beta measures the relationship between the fluctuations of the net asset values of the fund and the fluctuations of the levels of its reference indicator. Beta of less than 1 indicates that the fund "cushions" the fluctuations of its index (beta = 0.6 means that the fund increases by 6% if the index increases by 10% and decreases by 6% if the index falls by 10%). Beta higher than 1 indicates that the fund "magnifies" the fluctuations of its reference indicator (beta = 1.4 means that the fund increases by 14% when the index increases by 10% but also decreases by 14% when the index decreases by 10%). Beta of less than 0 indicates that the fund reacts inversely to the fluctuations of its reference indicator (beta = -0.6 means that the fund falls by 6% when the index increases by 10% and vice versa).

Bottom up investing: Investment based on analysis of individual companies, whereby that company's history, management, and potential are considered more important than general market or sector trends (as opposed to top down investing).

Capitalisation: A company's stock market value at any given moment. It is obtained by multiplying the number of shares of a company by its stock exchange price.

Duration: A bond's duration is the period beyond which interest rate variations will no longer affect its return. The duration is like a discounted average lifetime of all flows (interest and capital).

High yield: A loan or bond rated below investment grade because of its higher default risk. The return on these securities is generally higher.

Investment grade: A loan or bond that rating agencies have rated AAA to BBB-, generally indicating relatively low default risk.

Investment/net exposure rate: The investment rate constitutes the volume of assets invested expressed as a percentage of the portfolio. Adding the impact of the derivatives to this investment rate results in the net exposure rate, which corresponds to the real percentage of asset exposure to a certain risk. Derivatives can be used to increase the underlying asset's exposure (stimulation) or reduce it (hedging).

Sharpe ratio: The Sharpe ratio measures the excess return over the risk-free rate divided by the standard deviation of this return. It thus shows the marginal return per unit of risk. When it is positive, the higher the Sharpe ratio, the more risk-taking is rewarded. A negative Sharpe ratio does not necessarily mean that the portfolio posted a negative performance, but rather that it performed worse than a risk-free investment.

Top-down investing: An investment strategy which finds the best sectors or industries to invest in, based on analysis of the corporate sector as a whole and general economic trends (as opposed to bottom up investing).

VaR: Value at Risk (VaR) represents an investor's maximum potential loss on the value of a financial asset portfolio, based on a holding period (20 days) and confidence interval (99%). This potential loss is expressed as a percentage of the portfolio's total assets. It is calculated on the basis of a sample of historical data (over a two-year period).

Volatility: Range of price variation of a security, fund, market or index, which enables the measurement of risk over a given period. It is determined using the standard deviation obtained by calculating the square root of the variance. The variance is obtained by calculating the average deviation from the mean, which is then squared. The greater the volatility, the greater the risk.

ESG DEFINITIONS & METHODOLOGY

ESG: E for Environment, S for Social, G for Governance

ESG score Calculation: Only the Equity and Corporate Bond holdings of the fund considered. Overall Fund Rating calculated using MSCI Fund ESG Quality Score methodology: excluding cash and non ESG-rated holdings, performing a weighted average of the normalized weights of the holdings and the Industry-Adjusted Score of the holdings, multiplied by (1+Adjustment%) which consists of the weight of positively trending ESG ratings minus the weight of ESG Laggards minus the weight of negatively trending ESG ratings. For a detailed explanation see "MSCI ESG Fund Ratings Methodology", Section 2.3. Updated June 2023. <https://www.msci.com/documents/1296102/34424357/MSCI+ESG+Fund+Ratings+Methodology.pdf>

MSCI methodology: MSCI uses company disclosed emissions where available. In the instance these are not available, they use their proprietary model to estimate emissions. The model has three distinct modules, production model (used for power-generating utilities), company-specific intensity model (used for companies that have reported carbon emissions data in the past but not for all years), & industry segment-specific intensity model (used for companies that have not reported any carbon emissions data in the past). For further information, please visit MSCI's latest "Climate Change Metrics Methodology" document.

Scope 1: Greenhouse gas emissions generated from burning fossil fuels and production processes which are owned or controlled by the company.

Scope 2: Greenhouse gas emissions from consumption of purchased electricity, heat or steam by the company.

Scope 3: Other indirect Greenhouse gas emissions, such as from the extraction and production of purchased materials and fuels, transport-related activities in vehicles not owned or controlled by the reporting entity, electricity-related activities (e.g. T&D losses) not covered in Scope 2, outsourced activities, waste disposal, etc.

MAIN RISKS OF THE FUND

EQUITY: The Fund may be affected by stock price variations, the scale of which is dependent on external factors, stock trading volumes or market capitalization.

EMERGING MARKETS: Operating conditions and supervision in "emerging" markets may deviate from the standards prevailing on the large international exchanges and have an impact on prices of listed instruments in which the Fund may invest. **CURRENCY:** Currency risk is linked to exposure to a currency other than the Fund's valuation currency, either through direct investment or the use of forward financial instruments. **DISCRETIONARY MANAGEMENT:** Anticipations of financial market changes made by the Management Company have a direct effect on the Fund's performance, which depends on the stocks selected.

The Fund presents a risk of loss of capital.
