LUXEMBOURG SICAV SUB-FUND

Recommended  
minimum investment  
horizon:

5 YEARS

LU2295992247

Monthly Factsheet - 31/03/2025

## INVESTMENT OBJECTIVE

Carmignac Portfolio Human Xperience is a thematic fund (UCITS) invested in companies that demonstrate strong customer and employee satisfaction. Not only do we believe that both matter in order to retain clients and staff, a broad set of research and data support human experience as a key factor for business success. Companies that provide positive experiences to their customers and employees may be better positioned to achieve superior returns over the long term. This strategy is sector and region agnostic as it seeks to select best-in-class companies with attractive scores based on our proprietary database. The fund's objective is to outperform its benchmark over 5 years at least and is designed for investors who want to have a positive outcome on the society.

Fund management analysis can be found on P.3

## FUND MANAGEMENT ANALYSIS

### MARKET ENVIRONMENT

- The US markets had their worst month since December 2022. This decline is mainly attributed to the imminent announcement of new tariffs.
- Technology equities have suffered particularly. On the other hand, defensive sectors such as healthcare have performed positively.
- European and emerging markets continue to outperform the US. However, they have not been spared by concerns about customs barriers.
- Investors increasingly fear a scenario in which the US economy enters a sharp slowdown as inflation accelerates.

### PERFORMANCE COMMENTARY

- Over the month of March, the fund had a negative return both in absolute and relative terms.
- Our exposure to Consumer Discretionary was the primary reason for our underperformance over the month. In addition to our overweight to the sector which hurt our performance, a few names in the sector, such as Hilton, Marriott, Amazon and Adidas were among our largest detractors.
- Simultaneously, our underweight to Financials and lack of exposure to Energy stocks was also a contributor to our underperformance.
- Nevertheless, our overweight to Consumer Staples and stock selection in IT, through names like Samsung and Intuit were beneficial to the funds returns over the month.

### OUTLOOK AND INVESTMENT STRATEGY

- In March, we added back into higher beta names, particularly in the US as we think they have been oversold. We added back to Nvidia, Servicenow, Salesforce and Amazon, as well as Sony and TSMC.
- We reduced our weight in some lower beta names such as Nestle, Colgate-Palmolive, L'Oreal and Roche.
- Over the month we exited Diageo, a lower conviction position in which our investment case deteriorated with the current business headwinds the firm is facing.
- The exit in Diageo funded a new position in JP Morgan which demonstrates good customer and employee scores.
- We remain cautious in positioning our portfolio and continue to focus on higher quality companies.

## GLOSSARY

**Active Management:** An investment management approach where a manager aims to beat the market through research, analysis and their own judgement.

**Active share:** Portfolio active share measures how different from the reference indicator the portfolio is. The closer the active share is to 100%, the less identical stocks a portfolio has compared to its reference indicator, thus the more active the portfolio manager is compared to the market.

**Active Weight:** Represents the absolute value of the difference between the weight of a holding in the manager's portfolio and the same holding in the benchmark index.

**Alpha:** Alpha measures the performance of a portfolio compared to its reference indicator. Negative alpha means the fund performed less well than its reference indicator (e.g. if the indicator increased by 10% in one year and the fund increased by only 6%, its alpha is -4). Positive alpha means the fund performed better than its reference indicator (e.g. if the indicator increased by 6% in one year and the fund increased by 10%, its alpha is 4).

**Beta:** Beta measures the relationship between the fluctuations of the net asset values of the fund and the fluctuations of the levels of its reference indicator. Beta of less than 1 indicates that the fund "cushions" the fluctuations of its index (beta = 0.6 means that the fund increases by 6% if the index increases by 10% and decreases by 6% if the index falls by 10%). Beta higher than 1 indicates that the fund "magnifies" the fluctuations of its reference indicator (beta = 1.4 means that the fund increases by 14% when the index increases by 10% but also decreases by 14% when the index decreases by 10%). Beta of less than 0 indicates that the fund reacts inversely to the fluctuations of its reference indicator (beta = -0.6 means that the fund falls by 6% when the index increases by 10% and vice versa).

**Capitalisation:** A company's stock market value at any given moment. It is obtained by multiplying the number of shares of a company by its stock exchange price.

**Investment/net exposure rate:** The investment rate constitutes the volume of assets invested expressed as a percentage of the portfolio. Adding the impact of the derivatives to this investment rate results in the net exposure rate, which corresponds to the real percentage of asset exposure to a certain risk. Derivatives can be used to increase the underlying asset's exposure (stimulation) or reduce it (hedging).

**Net asset value:** Price of all units (in an FCP) or shares (in a SICAV).

**SFDR Fund Classification:** Sustainable Finance Disclosure Regulation (SFDR) 2019/2088. EU Act that requires asset managers to classify funds into categories, "Article 8" funds promote environmental and social characteristics, "Article 9" funds have sustainable investments as a measurable objective. In addition to not promoting environmental or social characteristics, "Article 6" funds have no sustainable objectives. For more information, please refer to <https://eur-lex.europa.eu/eli/reg/2019/2088/oj>

**Sharpe ratio:** The Sharpe ratio measures the excess return over the risk-free rate divided by the standard deviation of this return. It thus shows the marginal return per unit of risk. When it is positive, the higher the Sharpe ratio, the more risk-taking is rewarded. A negative Sharpe ratio does not necessarily mean that the portfolio posted a negative performance, but rather that it performed worse than a risk-free investment.

**SICAV:** Société d'Investissement à Capital Variable (Open-ended investment company with variable capital)

**VaR:** Value at Risk (VaR) represents an investor's maximum potential loss on the value of a financial asset portfolio, based on a holding period (20 days) and confidence interval (99%). This potential loss is expressed as a percentage of the portfolio's total assets. It is calculated on the basis of a sample of historical data (over a two-year period).

**Volatility:** Range of price variation of a security, fund, market or index, which enables the measurement of risk over a given period. It is determined using the standard deviation obtained by calculating the square root of the variance. The variance is obtained by calculating the average deviation from the mean, which is then squared. The greater the volatility, the greater the risk.

## ESG DEFINITIONS & METHODOLOGY

**ESG:** E for Environment, S for Social, G for Governance

**ESG score Calculation:** Only the Equity and Corporate Bond holdings of the fund considered. Overall Fund Rating calculated using MSCI Fund ESG Quality Score methodology: excluding cash and non ESG-rated holdings, performing a weighted average of the normalized weights of the holdings and the Industry-Adjusted Score of the holdings, multiplied by (1+Adjustment%) which consists of the weight of positively trending ESG ratings minus the weight of ESG laggards minus the weight of negatively trending ESG ratings. For a detailed explanation see "MSCI ESG Fund Ratings Methodology", Section 2.3. Updated June 2023. <https://www.msci.com/documents/1296102/34424357/MSCI+ESG+Fund+Ratings+Methodology.pdf>

**Principal Adverse Impacts (PAI):** Negative, material, or potentially material effects on sustainability factors that result from, worsen, or are directly related to investment choices or advice performed by a legal entity. Examples include GHG emissions and carbon footprint.

**Sustainable Investments:** The SFDR defines sustainable investment as an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

**Taxonomy Alignment:** In the context of an individual company, taxonomy alignment is defined as the proportion of a company's revenue that comes from activities that meet certain environmental criteria. In the context of an individual fund or portfolio, alignment is defined as the portfolio-weight weighted average taxonomy alignment of included companies.
