Strategy AuM is calculated by adding Carmignac Sécurité (ISIN: FR0010149120) and Carmignac Portfolio Sécurité (LU1299306321) assets under management. Performances of Carmignac Sécurité A EUR Acc (ISIN: FR0010149120) are net of fees (excluding possible entrance fees charged by the distributor). **Past performance is not necessarily indicative of future performance.**

## Developments since the start of the year

2020 has seen an unprecedented effort by central banks and governments to try to limit the negative economic fallout from the Covid-19 pandemic. **Even more than the amounts pumped into the economy, what has made that response so extraordinary has been the simultaneous action by monetary and fiscal authorities.** For example, the European Central Bank (ECB) has worked in concert with the European Union to compellingly convey their determination to keep interest rates low in order to ensure easy financial conditions with the help of tools to support the economy.

European Central Bank		European Union	
Tool	Amount	Tool	Amount
<b>APP</b> (Asset Purchase Program)	€20bn/month “as long as necessary”	<b>Recovery Plan</b>	€750bn (€390bn in grants and €360bn in loans)
<b>PEPP</b> (Pandemic Emergency Purchase Program)	€1350bn until June 2021	<b>ESM</b> (European Stability Mechanism)	€240bn
<b>Targeted LTROs</b> (Long-Term Refinancing Operations)	Targeted funding operations up to 50bp below deposit rate (-100bp) for 1Y period between Jun20 and Jun21	<b>SURE</b> (Support to mitigate Unemployment Risks in an Emergency)	€100bn financial assistance for labour markets
<b>Pandemic Emergency LTROs</b> (Long-Term Refinancing Operations)	Non-targeted full allotment funding operations at 25bp below refinancing rate	<b>EIB</b> (European Investment Bank)	€200bn financing for enterprises
		Loosening EU bank capital rules	EU banks will have the ability to increase sovereign debt exposure

Source: Carmignac, ECB, June 2020.

The assurance that the ECB would unfailingly buy financial assets, combined with the European Union’s pledge to cover part of member states’ financing needs as of 2021, has been enough to keep eurozone bond yields reasonably steady.

**The other big winner in this policy mix has been corporate credit.** Despite the unprecedented economic slump, companies have managed from early April onwards to secure the funding they need via primary issues. Our Fund has invested extensively in them to access the relatively high yields on offer. Once the worst was over, the low overall level of so-called risk-free rates, combined with central-bank support through asset purchases, made it possible for corporate credit to book solid performance. Credit spreads have thus narrowed considerably since May.

## How we’ve gone about lifting the Fund’s performance

**We’ve scaled back our holdings in the eurozone periphery.** The lockdowns and ensuing government spending responses are

bound to drive up fiscal deficits, thus invalidating our previous reasons for maintaining high exposure to issuers in those countries. Bonds from the eurozone periphery were badly battered by a flight to core by fixed-income investors in March.

**Asset class evolution in %NAV**

**Asset class evolution in Duration**

Source: Carmignac, 31/10/2020. \*Includes derivatives.

**We’ve stepped up our corporate credit allocation to take advantage of the primary market and the sizeable spreads on offer.** In

addition, the new situation has opened up opportunities in sectors that were particularly hard-hit by the public health crisis. In response, we have made targeted investments in hotels, restaurants and leisure industry providers, airlines and carmakers, where the securities of companies suffering unwarranted sell-offs in relation to their fundamentals could be snapped up at bargain prices. Many companies with commanding positions in their industries, sound business models, healthy balance

sheets and guaranteed access to liquidity due to their ability to pledge their assets as collateral (even if the public health crisis drags on for 12 to 18 months).

By end-July, we had raised our exposure to this kind of debt to a high point – 67% of our total portfolio (not including investments in CLOs) – accounting for almost two thirds of the Fund’s total modified duration. **From then on, we gradually reduced duration, and more markedly so in late August, in order to take profits and limit volatility risk.** We have mainly sold the longest maturities in our portfolio on negative-yielding bonds, as well as on issues that didn’t enjoy direct European Central Bank support.

**We’ve actively managed the peripheral and core debt in our portfolio.** The transition from national to increasingly Europe-wide crisis-fighting measures, along with the ECB’s announcement of highly favorable borrowing terms for banks, convinced us to engineer **a substantial return to short-dated eurozone peripheral sovereign bonds** (mainly Italian and Portuguese). Our holdings in core countries (not only Germany, but also the United States and Australia) have gone in the opposite direction. One by-product of the ongoing monetary policy easing is that market volatility can be expected to stay low – a plus point for carry strategies. We have accordingly moved to significant exposure to Italian sovereign debt, as it is now supported by a combination of ECB policy, the EU recovery package and lower medium-term political risk.

The upshot is that Carmignac Sécurité’s year-to-date return is +0.51%, vs +0.01% for its reference indicator\* and -0.44% for its Morningstar category as of 31 October 2020.

## The way forward

At end-October, corporate bonds accounted for 56% of our total assets (not including CLOs) and government bonds 24%. In corporate credit, we are holding onto our roster of issuers heavily affected by the Covid-19 slump and our selection of European structured credit. We also favour European bank debt, an asset class amply buoyed by central-bank largesse. **The abundant, cheap liquidity now available to banks comes in addition to the long-range support they enjoy, thereby contributing to their efforts over the past several years to clean up their balance sheets.**

The Fund’s overall modified duration is around 290 basis points.

**We will therefore be hewing to a cautious stance in the final quarter of the year so as to mitigate the impact of a possible rise in volatility.** 2020 will clearly be remembered as a year of momentous changes – and surprises for financial markets. The US elections, Brexit and new European

lockdowns in response to the virus all have the potential to generate market volatility. Following the recent vaccine discovery which has led to volatility spikes in rate and spread markets beginning of November, investors now should focus on Central bankers reactions. **By reducing portfolio risk while holding onto several strong convictions, we at Carmignac Sécurité should have the agility required in such an environment.**

Fund's positioning in the EUR Diversified Bond – Short Term category

Synthetic Risk and Reward Indicator

SRRI of 2 with a 5-year volatility of 1.9%

3

### in risks of the Fund

4

**INTEREST RATE:** Interest rate risk results in a decline in the net asset value in the event of changes in interest rates.

5

6

**CREDIT:** Credit risk is the risk that the issuer may default.

7

**RISK OF CAPITAL LOSS:** The portfolio does not guarantee or protect the capital invested. Capital loss occurs when a unit is sold at a lower price than that paid at the time of purchase.

**CURRENCY:** Currency risk is linked to exposure to a currency other than the Fund's valuation currency, either through direct investment or the use of forward financial instruments.

The Fund presents a risk of loss of capital.
